## **DETAILED ACTION**

## Election/Restrictions

1. Claims 11-14, 20, 21, 23-25, 68, and 69 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7/28/2003. Claims 11-14, 20, 21, 23-25, 68, and 69, were all previously withdrawn.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-8 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cioffe (5,449,423).

Cioffe discloses a composition comprising mixtures of potassium nitrate and potassium perchlorate of 35-69.5 % and of size 1-20 microns (col. 4 and 5). The composition also includes an organic acid of formula  $C_6H_8O_6$  but can also include compounds with more than 6 carbons at 36% (col. 4 and 5) and binders (col. 2). The claimed organic crystalline particle is not disclosed.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use terephthalic acid (with 8 carbons) since Cioffe discloses that similar compounds to ascorbic acid with more than 6 carbons may be used.

Application/Control Number: 10/046,008

Art Unit: 1755

4. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cioffe (5,449,423) as applied to claims 1-8 and 22 above, and further in view of Wise et al (H72).

Cioffe does not disclose or teach the use of phenolphthalein.

Wise et al teaches the use of phenols and acids such as phenolphthalein or terephthalic acid with potassium nitrate as a substitute for black powder.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the phenolphthalein as the organic compound with the compositions disclosed and taught by Cioffe since Wise suggests that it is known organic compound to be used as a fuel and substitution of one fuel for another is obvious.

5. Claims 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cioffe (5,449,423) as applied to claims 1-8 and 22 above, and further in view of Weber (5,620,691).

Cioffe does not disclose the specific claimed binder.

Weber teaches the use of PVA a vinyl acetate polymer in a composition that is a substitute for black powder and includes phenolphthalein and potassium nitrate.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the binder as taught by Weber with the composition of Cioffe, since Weber teaches that it is a known binder to be used in a composition that is a substitute for black powder and because Cioffe discloses that binders can be used. The moisture uptake is an inherent property of the taught binder. As to limitations which

Art Unit: 1755

are considered to be inherent in a reference, note the case law of In re Ludke, 169 USPQ 563; In re Swinehart, 169 USPQ 226, In re Fitzgerald, 205 USPQ 594; In re Best et al, 195 USPQ 430; and In re Brown, 173 USPQ 685, 688.

## Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive.

Applicant argues that Cioffe does not disclose the claimed organic crystalline particles.

This is not persuasive since Cioffe does suggest that similar compounds to ascorbic acid with more than 6 carbons may be used. Applicant further argues the combination of Cioffe with Wise and Weber due to the inclusion of phenolphthalein or terephthalic acid and PVA with black powder substitutes.

#### Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Application/Control Number: 10/046,008

Art Unit: 1755

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aileen B. Felton whose telephone number is 571.272.6875. The examiner can normally be reached on Monday-Friday 6:30-4:00, except alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571.272.1233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
